Eclipse Radio Science at NASA Marshall Space Flight Center

Ghee Fry, WL7C
Jesse McTernan, KN4EZR
Linda Rawlins

NASA Marshall Space Flight Center, Huntsville, AL

HamSCI Workshop | February 23-24, 2018
NJIT, Newark NJ
The MSFC Eclipse Radio Science Team

**Team:**

- Ghee Fry/WL7C: Heliophysics/Space Weather
- Linda Rawlins: Retired NASA/Citizen Scientist
- Jesse McTernan/KN4EZR: Heliophysics/Electrical Engineering
- Rob Suggs/KB5EZ: Space Environments/Meteoroids
- Linda Krause/K0DRK: Heliophysics/Ionosphere/Space Weather
- Dennis Gallagher: Heliophysics/Magnetospheres/Plasmaspheres
- Mitzi Adams: Heliophysics/Public Outreach

**Tools:**

- Ham Shack Rigs, Computers and Antennas
- Reverse Beacon Network
- Weak Signal Propagation Reporter Network
- Amateur Radio Community
Ionospheric Radio Wave Propagation
Engaging students and citizen scientists

Propagation (radio wave path)

- Lower frequencies (yellow)
- Higher (red) frequencies
- Different take-off angles

http://www.swpc.noaa.gov/phenomena/ionosphere
Eclipse Effects on Signal Path

- **Normal Summer Day**: (ignoring a lot of electrodynamic processes, and no E-Region)
  - D-Region absorbs 80M signals; 40M signals absorbed or signal strength decreases
- **Eclipse Day**: Solar EUV, X-rays decrease into eclipse; recovers out of eclipse
  - D-Region ionization reduced; ion-neutral recombination decreases electron density
  - Radio wave absorption decreases; 80M signals pass through D-Region
  - Erosion of lower F-Region raises ”reflection” height
  - Over-the-Horizon (OTH) signal paths lengthen; propagation range increases
  - Process reverses coming out of maximum eclipse

Left: Typical daytime signal paths.
Right: Signal paths during eclipse.

Why Didn’t WL7C Hear K0DRK?

On the day of the eclipse, why didn’t WL7C hear K0DRK on 40M just 30 miles (53 km) away?

• **Line of Sight?**
  • Terrain and Distance over the horizon

• **Ground Wave?**
  • Distance, soil conductivity

• **Near Vertical Ionospheric Skywave (NVIS)?**
  • $foF2$, was near 4.0 MHz +/- 0.5 MHz,
  • $hmF2$, height of F2 layer peak, ranging 196-244 km.

• PIM says no
Parameterized Ionospheric Model (PIM)
40M Mid-Latitude Ray Traces

7.0 MHz radio wave ray paths at different elevation (take-off) angles (E)

F = Frequency
E = elevation angle

$foF2 \sim 3.5 - 4.5$ MHz,
$hmF2 \sim 196-244$ km.
Conclusions and Lessons Learned

Conclusions

• 2017 total solar eclipse demonstrated that HF radio science can be done:
  • On a shoestring budget
  • By professional, citizen scientists, students and the amateur radio community
  • Using grass roots crowd-sourced propagation spot aggregators (e.g., RBN, WSPR)

Lessons Learned

• Data quality can be impacted by the social nature of crowd-sourced observations: accuracy of location, timing, consistency
• Do the site survey BEFORE the eclipse !
• Radio Science is FUN !
Next Steps

• Improving ionospheric radio science capabilities:
  • Install RBN CW Skimmer and WSPR receivers at MSFC/NSSTC
    Upgrade SDR hardware, software, site location*
  • Continue to engage Hams, students and citizen scientists

• Preparing for the next Big Eclipse opportunity
  • Chile, 2019 (?)
  • Mexico/USA 2024

    NASA/MSFC Postdoc Jesse McTernan/KN4EZR’s Talk for details

* Core element of the future 'HamSCI in Space' initiative

Thanks to ARRL, Virginia Tech and academic community, HamSCI,
the Solar Eclipse QSO Party participants and especially the curators
and volunteers of RBN and WSPRnet and other spot aggregator sites
NASA On The Air

- Apollo 17 45th anniversary – 11-19 December 2017, beginning of event
- NASA founded 60th anniversary (act signed by President Eisenhower) – 29 July 1958
- ISS First Element Launch 20th anniversary – 20 November 1998
- ISS Node 1 Launch 20th anniversary – 4 December 1998
- 50th anniversary of Apollo 8 – launch 21 December 1968
- Apollo 8 – splashdown 27 December 1968, end of event
